SUMMARY

Full-stack engineer with 3+ years shipping production software end-to-end, working AI-native: I develop real, deployed applications using agent engineering tools (Claude Code, Cursor, Copilot), GenAI APIs and LLMs, not just prototypes. I shipped a live AI product on the Anthropic Claude API that automates a full business workflow, backed by a tested engine and CI, and I have delivered customer-facing 3D and web solutions for 6+ enterprise clients. I turn ambiguous problems into practical, production-ready systems across frontend, backend and APIs. High ownership, product-minded.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Trezi (SmartVizX)

June 2023 - Present, Noida, India

- Delivered production 3D/XR, AR/VR and web solutions end-to-end for 6+ enterprise clients (Mahindra Lifespaces, Eldeco, Central Park, Hero, HNI, iGenesys), owning each from requirements to deployed product.
- Integrated AI and voice services into client deliverables, wiring a client Q&A API plus speech-to-text and text-to-speech (AWS Transcribe) into a live sales-concierge experience.
- Developed browser-based 360-degree property viewers (Three.js, WebGL, WebXR) and optimized rendering pipelines for performance at scale.
- Engineered an internal Unreal Engine plugin that automated repetitive setup, cutting presentation setup time by up to 30%.

Customer Service Associate, Amazon

Oct 2019 - May 2023, Noida, India

- Handled 500 to 1000+ customer interactions in a high-volume customer-facing role, holding an average handling time under 10 minutes while resolving complex, ambiguous requests.
- Took on Training Subject Matter Expert responsibilities on an interim basis, training and onboarding 6 to 7 teams (130+ new hires) and driving process improvements that raised team productivity.

PROJECTS

LeadScraper *- End-to-end AI product - Next.js, TypeScript, Claude API (built AI-native with Claude Code, Cursor)*

lead-scraper-gold.vercel.app | github.com/abh1shekmishra/LeadScraper

- Shipped an end-to-end GenAI application that automates a full lead-generation workflow: finds real businesses, probes each site server-side to detect a provable digital gap, scores leads hot/warm/cold, and drafts personalized outreach with the Claude API.
- Applied prompt engineering and a strict quality gate the whole pipeline enforces (never make a claim the tool cannot prove). Unit-tested engine (Vitest), CI, and a keyless zero-cost demo mode. Production-grade, not a prototype.

Undercover (impostor-who) *- React, strict TypeScript, Zustand, PWA*

impostor-who-mu.vercel.app | github.com/abh1shekmishra/impostor-who

- Designed an offline-first React/TypeScript app around a pure, deterministic, fully unit-tested engine (seeded RNG, 42 tests) cleanly separated from the UI.
- Drove 11 game modes via declarative rule flags so the engine never branches on a mode id; persisted state machine with versioned migrations. GitHub Actions CI.

broll *- Python, Flask, information-retrieval ranking*

- Created a local, bring-your-own-key tool that ranks and downloads stock B-roll against a shot list using a relevance model (tag overlap, resolution and result-position scoring). Unit-tested ranking (pytest), CI.

SKILLS

AI-native development: Claude Code, Cursor, GitHub Copilot, Codex, used across the full SDLC (build, test, debug, document, deploy)

AI / GenAI: Anthropic Claude API, GenAI API integration, LLMs, LLM agents and workflow automation, prompt engineering, output evaluation and quality gating, rapid prototyping

Frontend / Web: React, Next.js, TypeScript, Tailwind CSS, Zustand, PWAs, REST APIs

Languages: TypeScript, JavaScript, Python, C++, C#, HTML/CSS, SQL

Backend / Tooling: Node.js, Flask, Git/GitHub, GitHub Actions (CI), Vitest, pytest, Vercel

Real-time 3D / XR: Unreal Engine 4/5, Blueprints, Three.js, WebGL, WebXR, AR/VR

EDUCATION

Bachelor of Computer Applications (BCA), IGNOU

2018 - 2020 (incomplete)

JD Academy, Sahibabad

2014 - 2017, Senior Secondary and Secondary
