SUMMARY

Real-time 3D developer with 3 years in Unreal Engine 4/5 (C++, Blueprints, multiplayer) and Unity (C#). I build VR, AR and desktop applications, including standalone VR and an ESP32 sensor system streaming into Unity over WiFi. I optimize scenes for framerate and have delivered 3D and XR projects for 6+ enterprise clients at Trezi. I also build web and AI products in React, Next.js and TypeScript.

SKILLS

Unreal Engine: Unreal Engine 4/5, C++, Blueprints, multiplayer and replication, VR development, Unreal C++ plugins and editor tooling

Unity and XR: Unity (C#), standalone VR on Meta Quest (APK builds), XR Interaction Toolkit, OpenXR, AR (ARKit, ARCore), WebXR

IoT and hardware: ESP32, sensor data over WiFi into Unity

3D pipeline and performance: Datasmith, BIM/Revit import, LiDAR point clouds, lighting, occlusion strategies, profiling and debugging, VR framerate optimization

Web and AI: React, Next.js, TypeScript, Three.js, WebGL, Node.js, Claude API

Languages and tools: C++, C#, TypeScript, JavaScript, Python, Git

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Trezi (SmartVizX)

June 2023 – Present | Noida, India

- Build immersive AR, VR and desktop applications in Unreal Engine 5 and C++ for architecture and design professionals.
- Delivered 3D and XR projects end to end for 6+ enterprise clients: Mahindra Lifespaces, Eldeco, Central Park, Hero, HNI, iGenesys.
- Optimize real-time scenes with light building, occlusion strategies and profiling until they hold framerate in VR. Built browser 360° viewers (Three.js, WebXR).
- Build and maintain internal Unreal C++ plugins that automate scene setup, so designers who don't work in the engine can get a scene ready on their own.

Customer Service Associate, Amazon

Oct 2019 – May 2023 | Noida, India

- High-volume customer-facing role. Interim Training SME, onboarded 130+ new hires.

PROJECTS

Museum of the Bible VR Tour (Unity, C#, standalone VR)

- Built a standalone VR tour in Unity, packaged as an Android APK that runs directly on the headset with no PC.

MPVehiclePrototype (Unreal Engine 5.4, C++, personal project)

- Multiplayer vehicle prototype: host or join by code through the Online Subsystem from a custom Slate UI, with replicated vehicle pawns, player state and an authority-driven damage component. github.com/abh1shekmishra/MPVehiclePrototype

Mahindra Citadel Digital Twin (Unreal Engine, C++, AWS Transcribe)

- Real-time 3D digital twin of a residential project, explorable in VR and on desktop with avatar-based navigation, plus a voice concierge on AWS Transcribe.

Prism, Unreal Engine Plugin (C++, UE5, internal tool)

- Unreal C++ plugin automating batch light building, collision and navigation meshes, and material switching, cutting AR and VR presentation setup time by up to 30%.

ESP32 Motion Sensor System (Freelance, ESP32, Unity)

- ESP32 sensor system that reads a bat's movement and streams the data to Unity over WiFi, delivered end to end.

Panasonic 3D Globe App (Freelance, Unity, C#)

- Cross-platform Windows and macOS desktop app in Unity with an animated 3D globe and a live flight-tracking feed from a Flight Radar API, delivered as packaged builds.

Web and AI Projects (React, Next.js, TypeScript, Three.js, Claude API)

- Terra (3D globe, six live feeds, 60fps with GPU instancing and GLSL shaders), LeadScraper (AI lead generation on the Claude API, unit-tested, CI), Undercover (offline-first PWA game).
